

4-31a

Given: $V_0 = 30.0 \text{ m/s}$

$$\begin{aligned}
 t = & & t = \\
 V_{0x} = V_0 \cos \theta & & V_{0y} = V_0 \sin \theta \\
 V_x = & & V_y = \\
 a_x = 0 & & a_y = -9.8 \text{ m/s}^2 \\
 x_0 = 0 & & y_0 = 0 \\
 x = & & y = 0
 \end{aligned}$$

Assumption: see book

Goal: Find maximum x .

Solution: Solve for t using vertical d'vat. Solve for x using horizontal d'vat.

$$y^0 = y_0^0 + V_{0y} t + \frac{1}{2} a_y t^2$$

$$0 = t(V_{0y} + \frac{1}{2} a_y t)$$

$$V_{0y} + \frac{1}{2} a_y t = 0$$

$$t = -\frac{2V_{0y}}{a_y}$$

$$= \frac{-2V_0 \sin \theta}{a_y}$$

Solve for x :

$$x = x_0^0 + V_{0x} t + \frac{1}{2} a_x t^2$$

$$x = (V_0 \cos \theta) t$$

$$x = (V_0 \cos \theta) \left(-\frac{2V_0 \sin \theta}{a_y} \right)$$

$$= \frac{-2V_0^2 \cos \theta \sin \theta}{a_y}$$

$$\boxed{x = \frac{-V_0^2}{a_y} \sin 2\theta} \quad (\sin 2\theta = 2 \sin \theta \cos \theta)$$

What is maximum?

θ for max x is that θ for which $\sin 2\theta = 1$.

$$2\theta = 90^\circ$$

$$\theta = 45^\circ$$

$$x = -\frac{v_0^2}{a_y} \sin 2\theta$$

$$x_{\max} = -\frac{v_0^2}{a_y}$$

$$= -\frac{\left(30 \frac{\text{m}}{\text{s}}\right)^2}{-9.8 \frac{\text{m}}{\text{s}^2}}$$

$$= 90 \text{ m}$$

b.

$$v_{\min} = \sqrt{v_x^2 + v_y^2}$$

$$= \pm v_x$$

$$= \pm v_{0x}$$

$$v_{\min} = + v_{0x}$$

$$= v_0 \cos \theta$$

$$= 30 \frac{\text{m}}{\text{s}} \cos 45^\circ$$

$$= 30 \frac{\sqrt{2}}{2} \frac{\text{m}}{\text{s}}$$

$$= 15\sqrt{2} \frac{\text{m}}{\text{s}}$$
